A completely new experience

Eppendorf Research[®] plus

ADJ

2

Eppendorf sets a new standard in pipetting. The ultra light Eppendorf Research plus pipette meets the highest needs in precision and accuracy – combined with ultimate ergonomics and increased flexibility.

It is a good feeling to know you are doing the right thing – to know you are working with one of the most advanced pipettes in the world. A spring loaded tip cone, a secondary adjustment option, an improved volume display – and all that in an ultra light, fully autoclavable pipette: That is the new Eppendorf Research plus pipette. **Ergonomics:** Feel the difference in weight, pipetting forces and the spring loaded tip cone.

Flexibility: Your next experiment will need new pipetting schemes. Your new laboratory might have different sources of contamination. Your new pipette should offer all the flexibility you need. Adjust your Research plus to your needs, autoclave the entire pipette or only the lower part. Choose among single channel, multi channel and fix-volume pipettes in different sizes.

Robustness: Durability was tested thoroughly and has met our highest quality requirements. Resistance to chemical, thermal and mechanical stress is now unchallenged!

Outstanding ergonomic concept

PhysioCare Concept®

The Eppendorf PhysioCare Concept[®] stands for ultimate durability, perfect balance, intuitive operation and minimal user exertion. All this has been further optimized in the Eppendorf Research plus pipette.

Check out **www.physiocare-concept.info** or try the new Eppendorf Research plus pipette!

The more strain you experience, the less energy you have. And because energy is a very precious and exhaustible resource, we try to use it as efficiently as possible. Thus, we have reduced the operating forces and the weight considerably.

Patent pending.

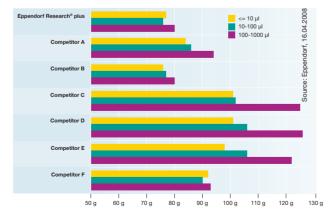

Outstanding light weight design

Lighter than you would think!

An Eppendorf Research plus pipette is of extremely low weight!

This can only be achieved by using the most advanced materials and production processes, including the new Eppendorf PerfectPiston[™] system, made of Fortron[®]. Fortron is an organic polymer with impressive characteristics. It is highly resistant to heat, acids and alkalies, mildew, bleaches, aging, sunlight and abrasion. It absorbs only small amounts of solvents and resists dyeing. This means your pipette is safe, robust and ultra light.

• See the low weight of the Research plus - no matter which size.

Outstanding ease of use

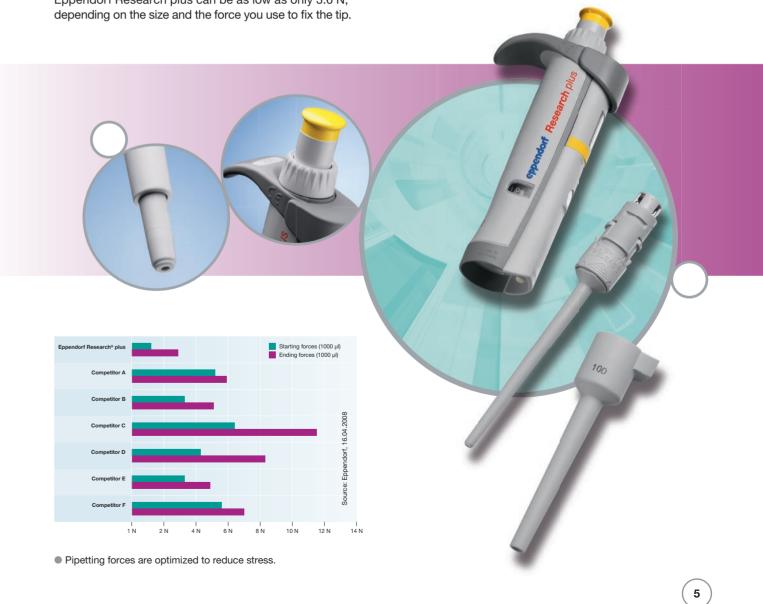

Don't waste energy!

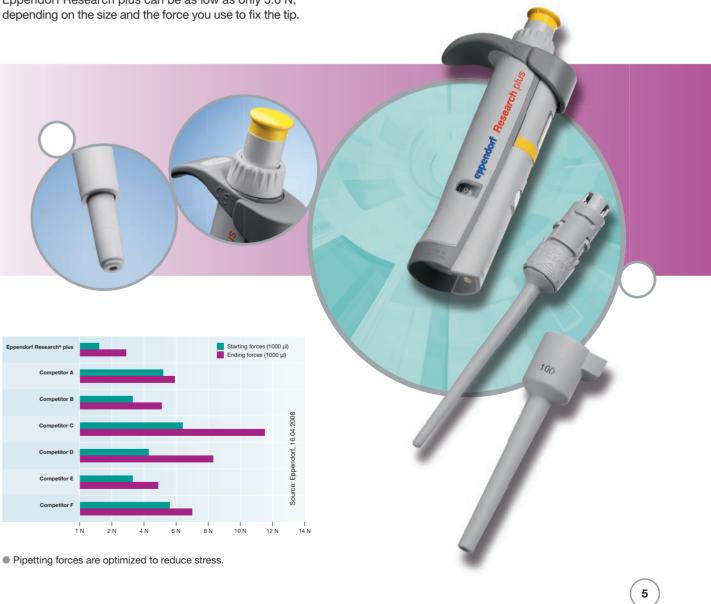

Attachment force

Achieve optimal tightness with minimal attachment forces with the Eppendorf Research plus. The spring loaded tip cone helps to reduce stress without sacrificing tightness. Just give it a try - you will love it!

Tip ejection forces

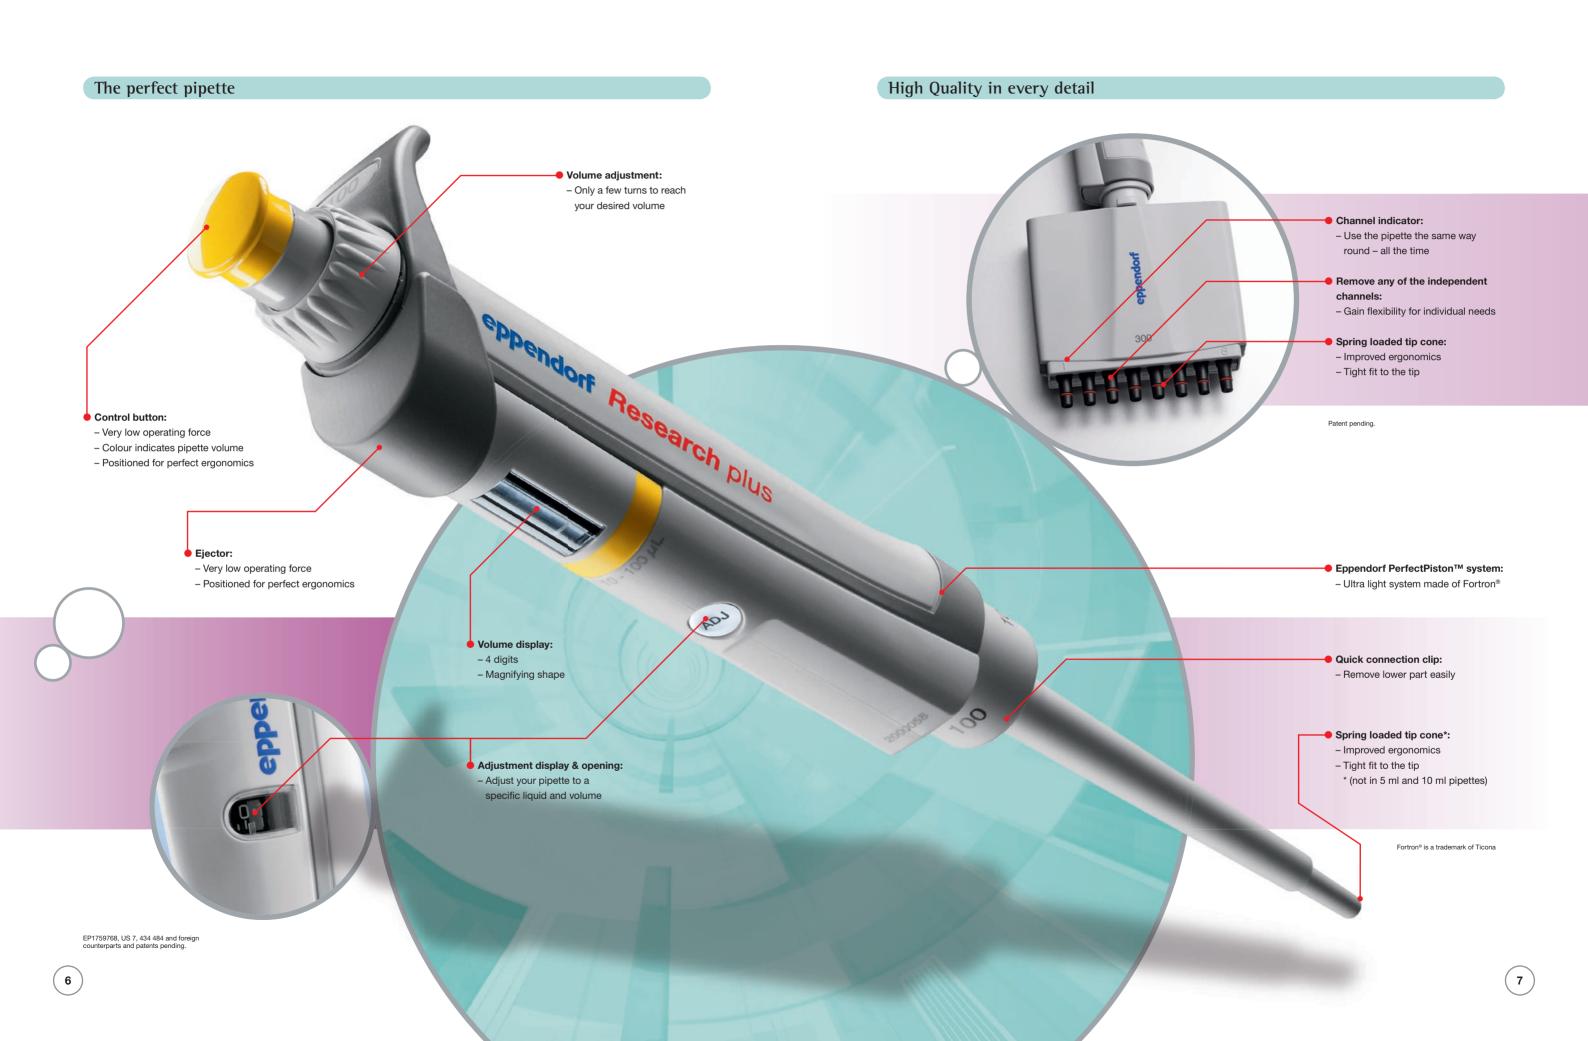

How many tips do you use per day? Even small differences in the tip ejection forces make a big change if you do it day by day. The tip ejection forces of the Eppendorf Research plus can be as low as only 3.6 N,

Positioning of control elements

The positions and shapes of all control buttons and displays have been optimized again to ensure stress-free workflow and intuitive usage. The volume adjustment wheel needs only a few turnarounds from maximum volume to minimum volume.

The perfect match

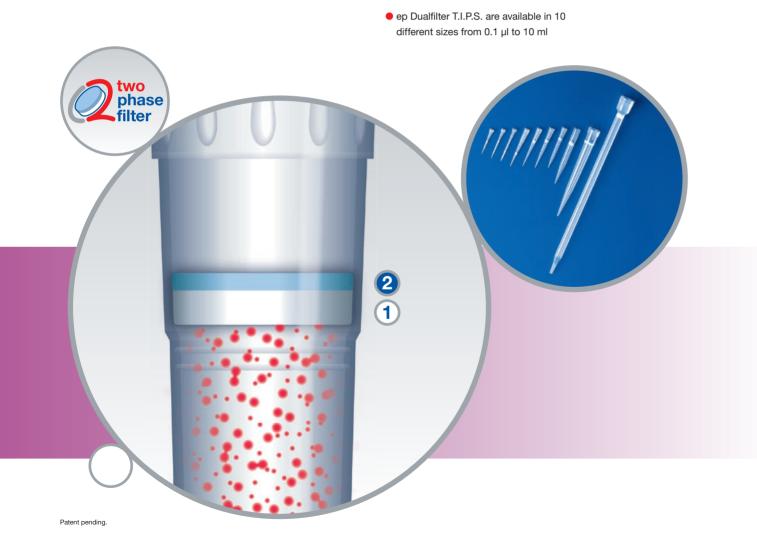

ep Dualfilter T.1.P.S.[®] – Stop aerosols!

Product features:

- Double protection provided by the two phase filter
- Provides maximum protection for both pipette and sample
- Ultimate absorption of aerosols and biomolecules
- Free from PCR inhibiting additives and particles from the filter material itself
- Supplied sterile and Eppendorf PCR clean

The high quality, flexible plastic material ensures a leak-proof seal and minimum attachment and ejection forces - when used in combination with Eppendorf pipettes, they form the perfect system for contamination-free sample dispensing.

For more information, detailed certificates and important facts concerning accredited labs, visit www.eppendorf.com

NEW! Also available as epT.1.P.S.[®] LoRetention

The new epT.I.P.S. LoRetention ensures best results while pipetting solutions detergents. Detergents leave an adhesive layer of liquid inside standard pipette tips. The ultrahydrophobic surface of epT.I.P.S. LoRetention creates the "Pearl Effect" - the maximum amount of sample can be recovered thus providing an unbeaten reproducibility.

• The "Pearl Effect" – a comparison of the amount of residual liquid when pipetting solutions that contain detergents: 1 Maximum recovery with epT.I.P.S. LoRetention Significant loss of sample using standard tips.
